- Presumed Active Cases- 10%
- Total Cases- 26%
- Current Hospitalizations- 27%
- ICU Patients (Active)- 34%
- ICU Patients (Total)- 38%
- Total Deaths- 20%
- Overall MB 5-Day Test Positivity Rate- 43.5%

Epidemiologic Curve - First Nations COVID-19 Epidemic Curve by RHA

For the purposes of this report, First Nations people are identified through a variety of mechanisms. This is because not any one method generates a complete list of the First Nations population in Manitoba. The mechanisms used are:

- PHINs of cases and tested individuals are matched up to Status First Nations in the Indian Status Registry - ISR. This list is current as of June 2020.
- Self-report in the course of the COVID case investigation.
- Manual review of familial linkages identified in the course of COVID case investigations. Linkages are made by reported relationships, shared last names or addresses, and only counts horizontal-sibling - or downward - offspring - linkages.

Data corrections or updates can result in case records being removed and/or updated and may result in totals different from past publicly reported case counts.
